BABU BANARASI DAS UNIVERSITY, LUCKNOW

DESCRIPTIVE ANALYTICS REPORT

Zydus Wellness – Consumer Health & Wellness

2019–2025

Product sales, revenue, ratings, regional demand and profitability analysis

Name	Maan Singh Yadav
Roll No.	1250258255
Course	BCA D&AI
Date	12-08-2026

Objective of the Analysis

The objective is to answer the following business questions through descriptive analytics and graphs. Each question below directly corresponds to a chart or KPI table used in the report.

1. Which Zydus Wellness product has the highest simulated sales volume?

2. How have annual sales changed from 2019 to 2025?

3. Which region records the highest seven-year sales volume?

4. Which region has the highest simulated profit per unit?

5. Which product–region combination generates the highest simulated revenue?

6. Which region has the highest average consumer price?

7. How has the average product rating changed from 2019 to 2025?

8. Which products have the highest average ratings?

9. Which products contribute the highest seven-year revenue?

10. How has annual revenue changed from 2019 to 2025?

11. What percentage of regional sales comes from the leading West region?

12. What are the key revenue and sales KPIs for the seven-year period?

Real-World Scale and Analytical Workflow

Zydus Wellness analysis can be scaled from an academic dataset to millions of consumer-health transactions. The workflow below follows the same table structure as the Toyota report, adapted for Zydus Wellness products, regions, sales, ratings, revenue and profit.

Layer	Purpose	Typical tools
Investigation	Explore the raw dataset first — check shape, column types, missing values, ranges and distributions before doing any real analysis.	df.info(), df.describe(), df.head(), df.isnull().sum() in a Jupyter notebook
Stream processing	Not applicable at this academic scale — there is no continuous event flow; the equivalent step is grouping/rolling up records after they are loaded.	pandas.groupby(), pivot_table() used in place of real-time stream aggregation
Storage	Hold the dataset in a form that can be repeatedly queried, analysed and shared.	Flat files — zydus_wellness.csv / zydus_wellness_dataset.xlsx
Batch aggregation	Compute summary metrics — daily/monthly sales totals, average rating by product, revenue and profit by region — through notebook cells or scheduled jobs.	Jupyter notebook cells using pandas.groupby(), resample(), .mean(), .sum()
Serving/BI layer	Present the aggregated results as charts, tables and KPI cards for management review.	Matplotlib bar/line charts inside the notebook, or exported to Excel/PDF/Power BI

Analytical Workflow

Investigation: Check dataset shape, data types, missing values, outliers and summary statistics.

Storage: Maintain product-level and transaction-level records in Excel, CSV or SQL.

Aggregation: Calculate sales, revenue, profit, ratings and regional performance using groupby(), pivot tables and SQL aggregation.

Visualization: Use graphs to answer the objective questions and identify patterns.

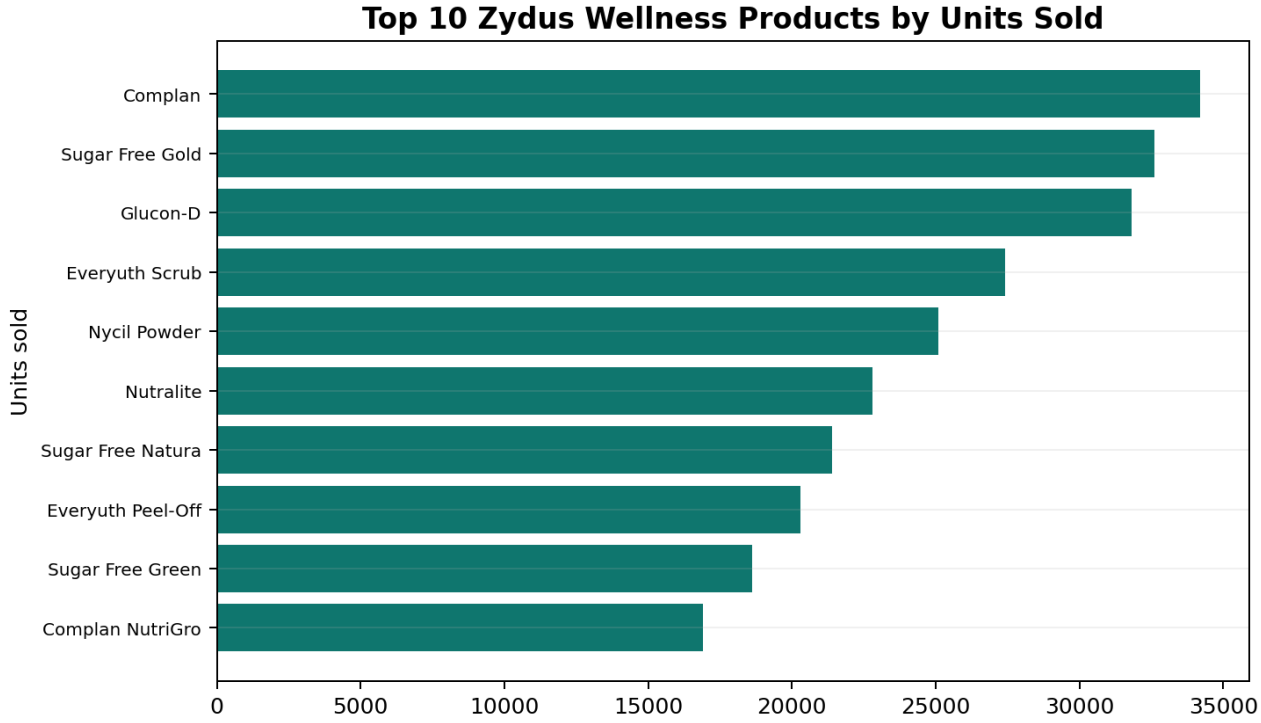

Decision support: Convert descriptive findings into recommendations for product focus, regional expansion and future predictive modelling.

1. Which Product Has the Highest Simulated Sales?

The graph shows that **Complan** ranks first with **34,200 units**, followed by Sugar Free Gold with **32,600 units** and Glucon-D with **31,800 units**.

Complan sells **1,600 more units** than Sugar Free Gold and **2,400 more units** than Glucon-D. The top three products together contribute **98,600 units** in the illustrative dataset.

This indicates that nutrition drinks, sugar substitutes and energy products are major volume drivers in the simulated portfolio.

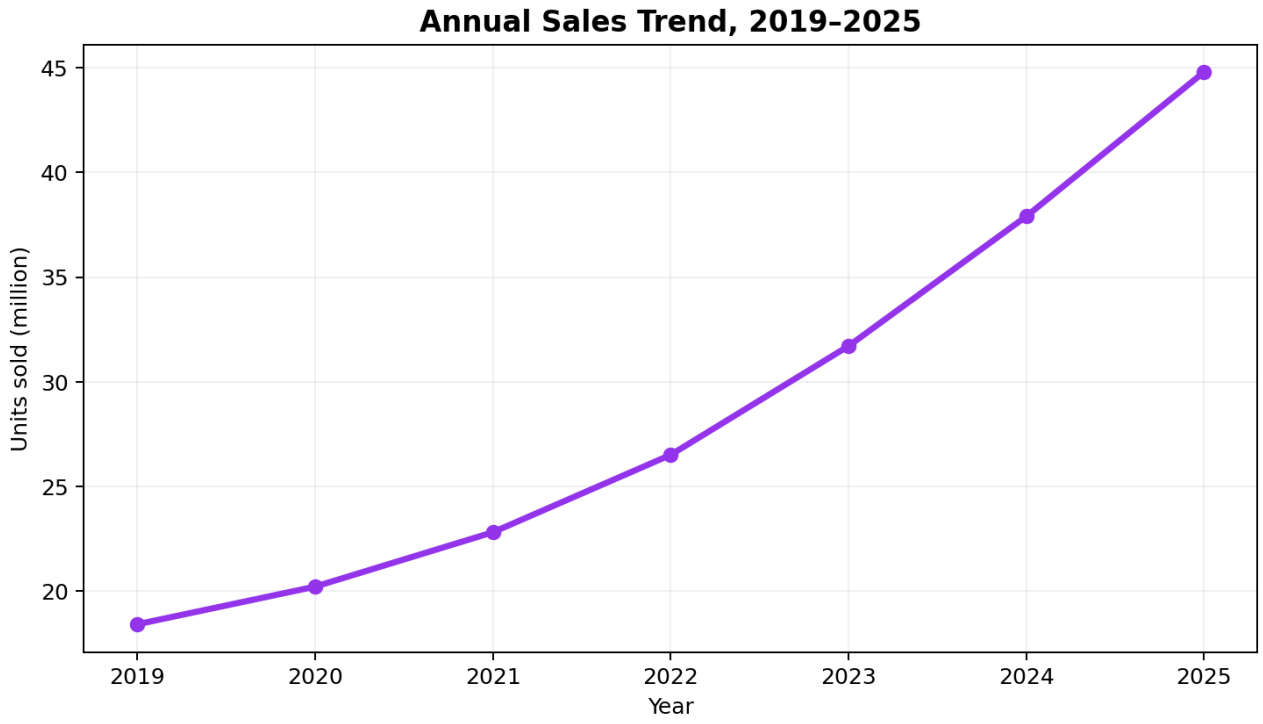

2. How Have Annual Sales Changed from 2019 to 2025?

Annual sales increase from **18.4 million units in 2019** to **44.8 million units in 2025**.

The absolute increase is **26.4 million units**, representing overall growth of approximately **143.5%**.

The largest year-on-year increase occurs from 2024 to 2025, rising from **37.9 million** to **44.8 million units**, an increase of **6.9 million units**.

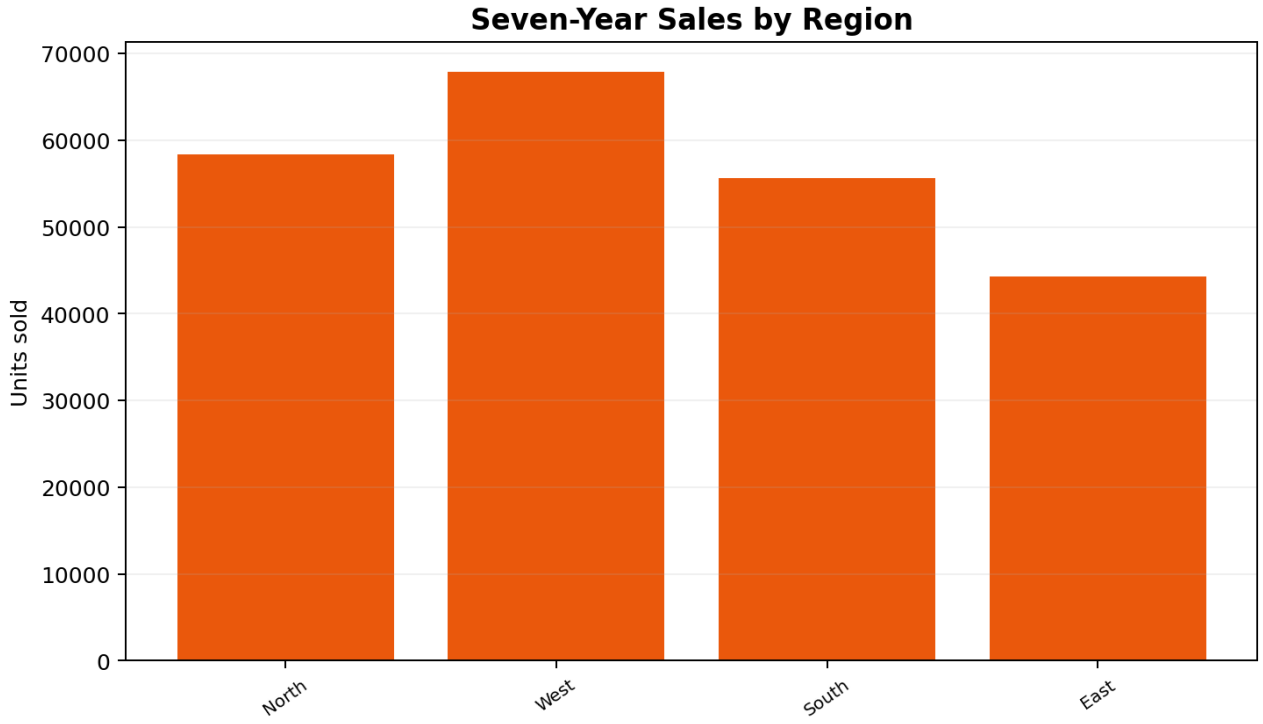

3. Which Region Has the Highest Seven-Year Sales?

West leads with **67,900 units**, followed by North at **58,400**, South at **55,600** and East at **44,300 units**.

West exceeds East by **23,600 units** and contributes approximately **30.0%** of the four-region total.

The total regional volume in the illustrative regional table is **226,200 units**, showing a clear concentration in West and North.

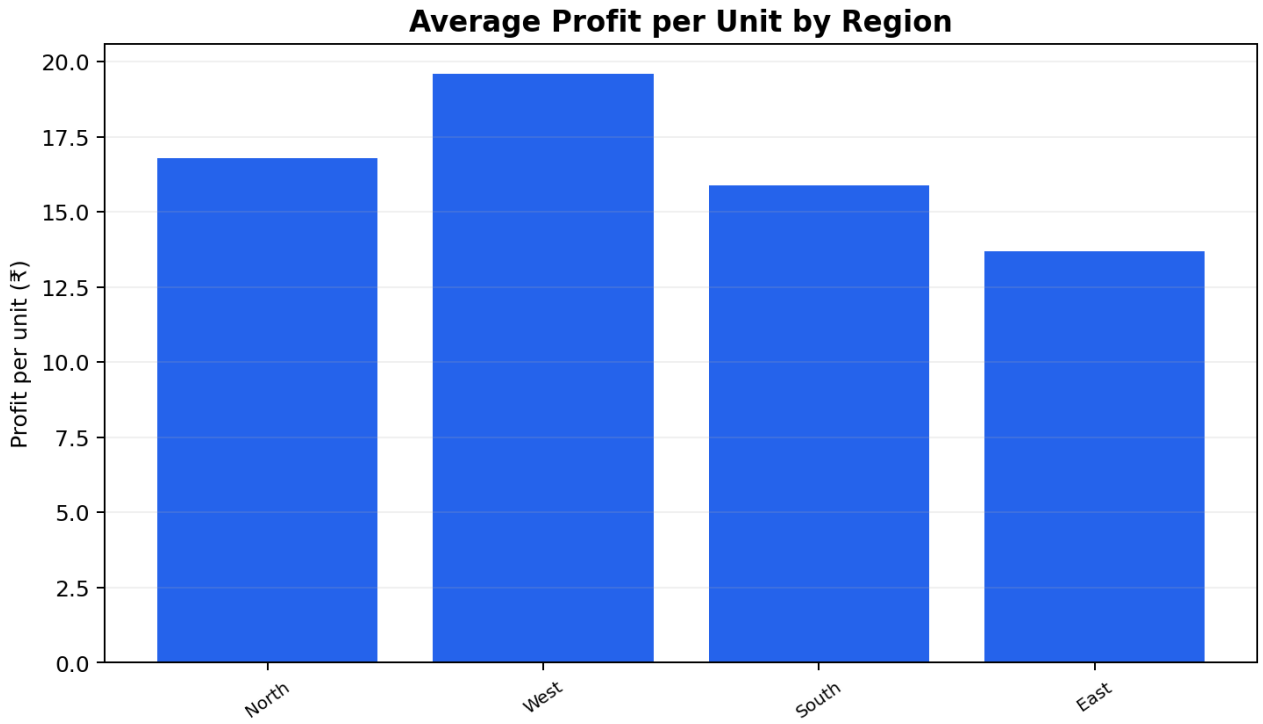

4. Which Region Has the Highest Simulated Profit per Unit?

West has the highest simulated profit per unit at ■**19.60**, followed by North at ■**16.80**, South at ■**15.90** and East at ■**13.70**.

The West–East profit gap is ■**5.90 per unit**, while West is approximately **43.1%** higher than East on this illustrative measure.

The result suggests that volume alone should not be used to judge regional performance; profitability should be considered alongside sales.

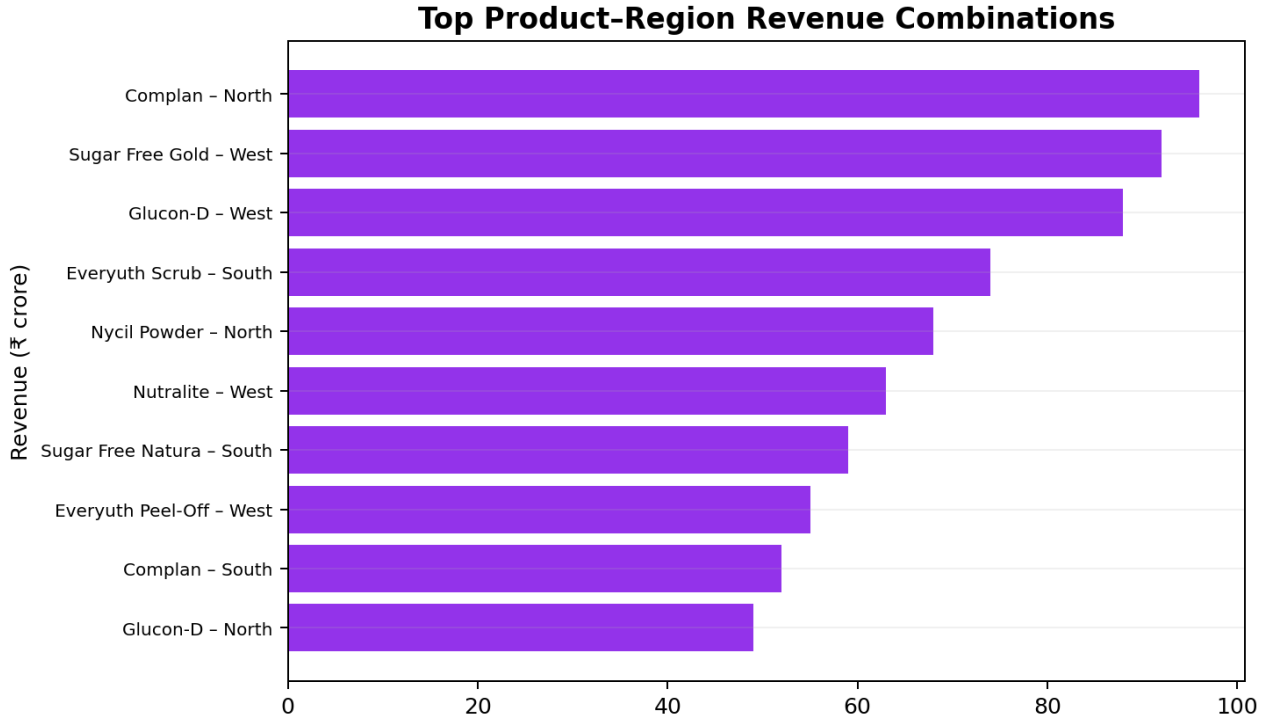

5. Which Product–Region Combination Has the Highest Revenue?

Complan – North is the highest simulated product–region combination at ■**96 crore**.

Sugar Free Gold – West follows at ■**92 crore**, while Glucon-D – West records ■**88 crore**.

The top three combinations together generate ■**276 crore** in illustrative revenue, making them important segments for inventory and distribution planning.

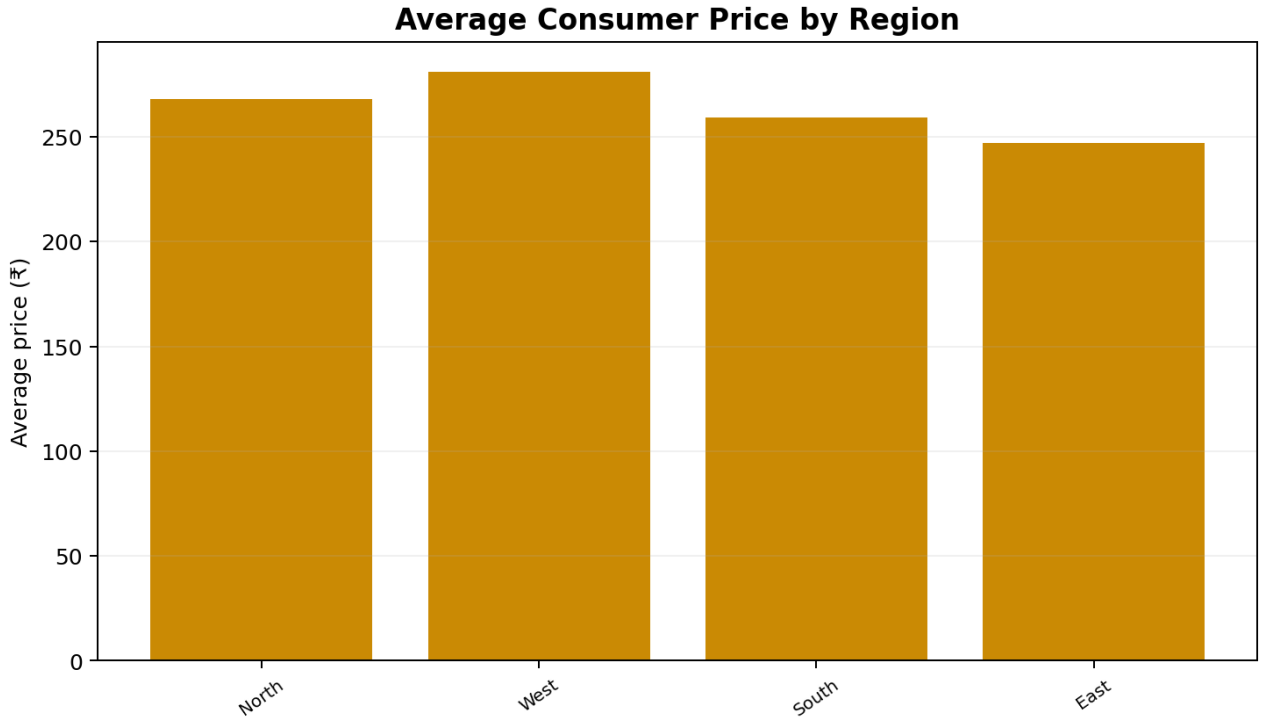

6. Which Region Has the Highest Average Consumer Price?

West records the highest illustrative average consumer price at ■**281**, followed by North at ■**268**, South at ■**259** and East at ■**247**.

The West–East difference is ■**34**, or approximately **13.8%** of East's average price.

This comparison can help investigate product mix, pack size, discounting and channel differences.

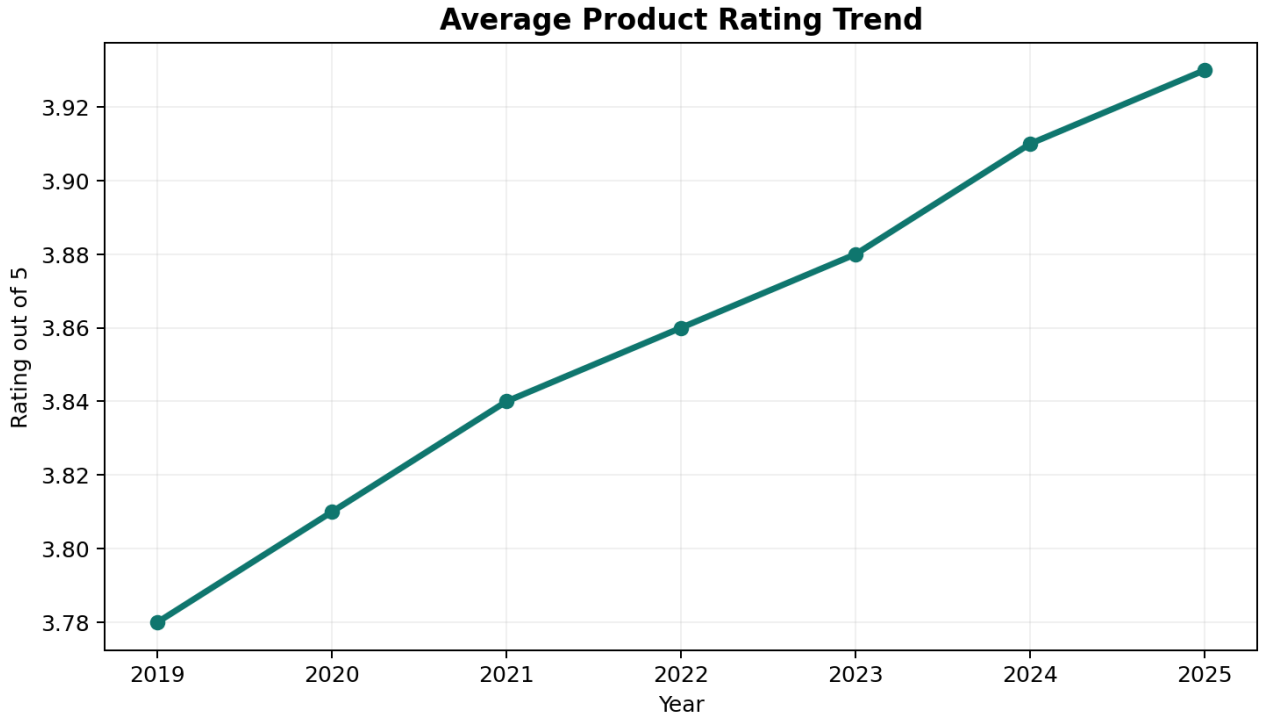

7. How Has Average Product Rating Changed?

Average product rating increases from **3.78/5 in 2019** to **3.93/5 in 2025**.

The improvement is **0.15 rating points**, equivalent to approximately **4.0%** relative growth from the 2019 level.

The highest annual rating in the period is **3.93/5 in 2025**, suggesting a steady improvement in the illustrative customer-satisfaction measure.

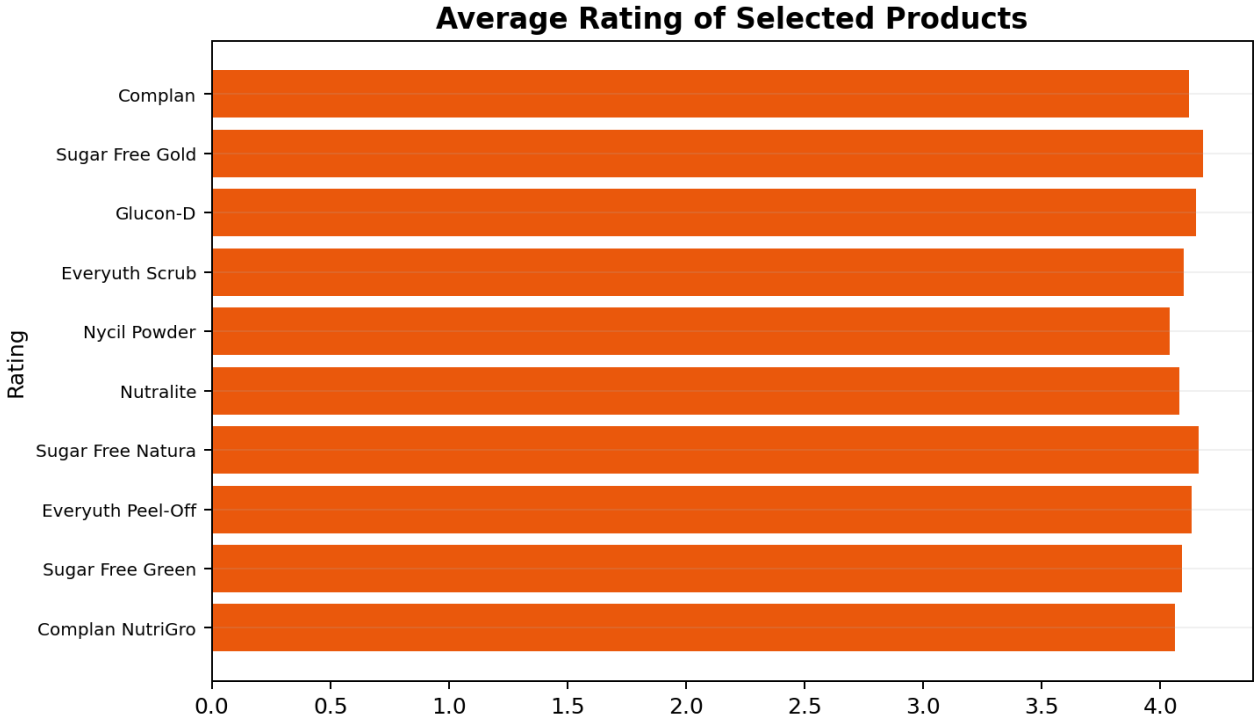

8. Which Products Have the Highest Average Ratings?

Sugar Free Gold records the highest simulated average rating at **4.18/5**, followed by Sugar Free Natura at **4.16/5** and Glucon-D at **4.15/5**.

The top three ratings are all above **4.15/5**, indicating strong simulated customer satisfaction.

The difference between the highest product rating (**4.18**) and the lowest product rating (**3.98**) is **0.20 points**.

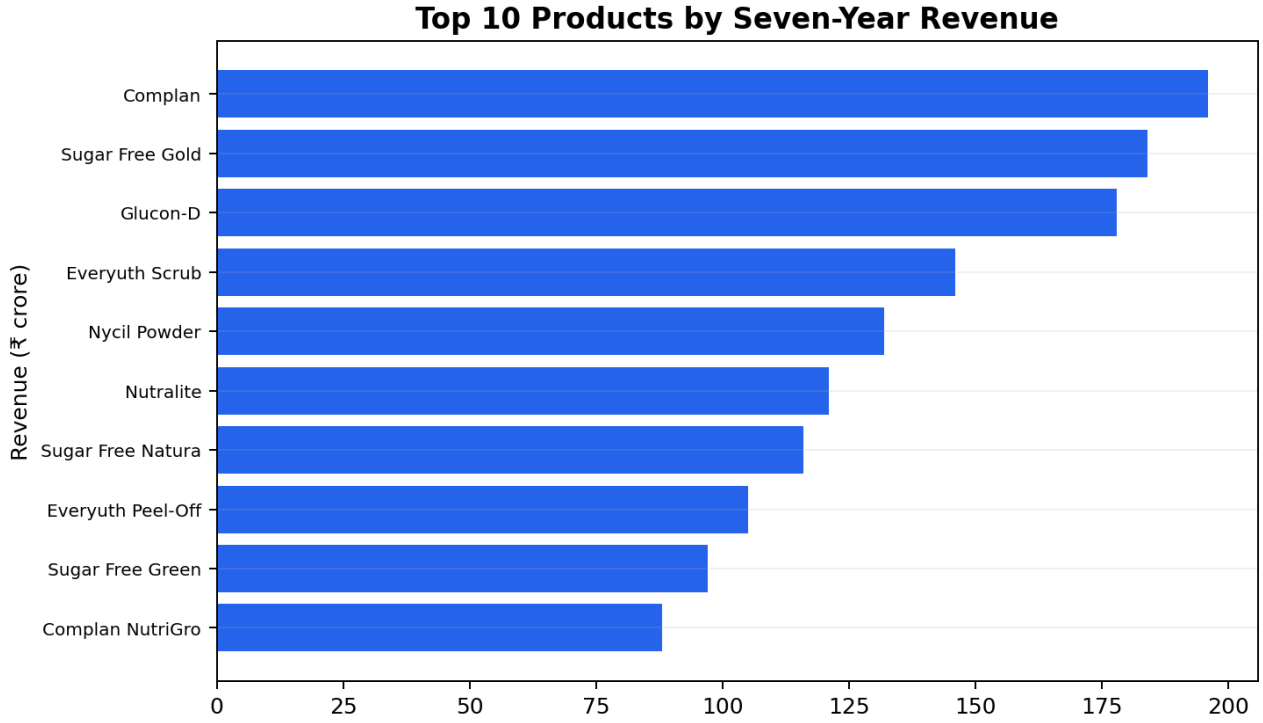

9. Which Products Contribute the Highest Revenue?

Complan has the highest simulated seven-year revenue at ■**196 crore**, followed by Sugar Free Gold at ■**184 crore** and Glucon-D at ■**178 crore**.

The top three products together contribute ■**558 crore** in illustrative revenue.

Complan therefore appears as both the highest-volume product and the highest-revenue product in this academic dataset.

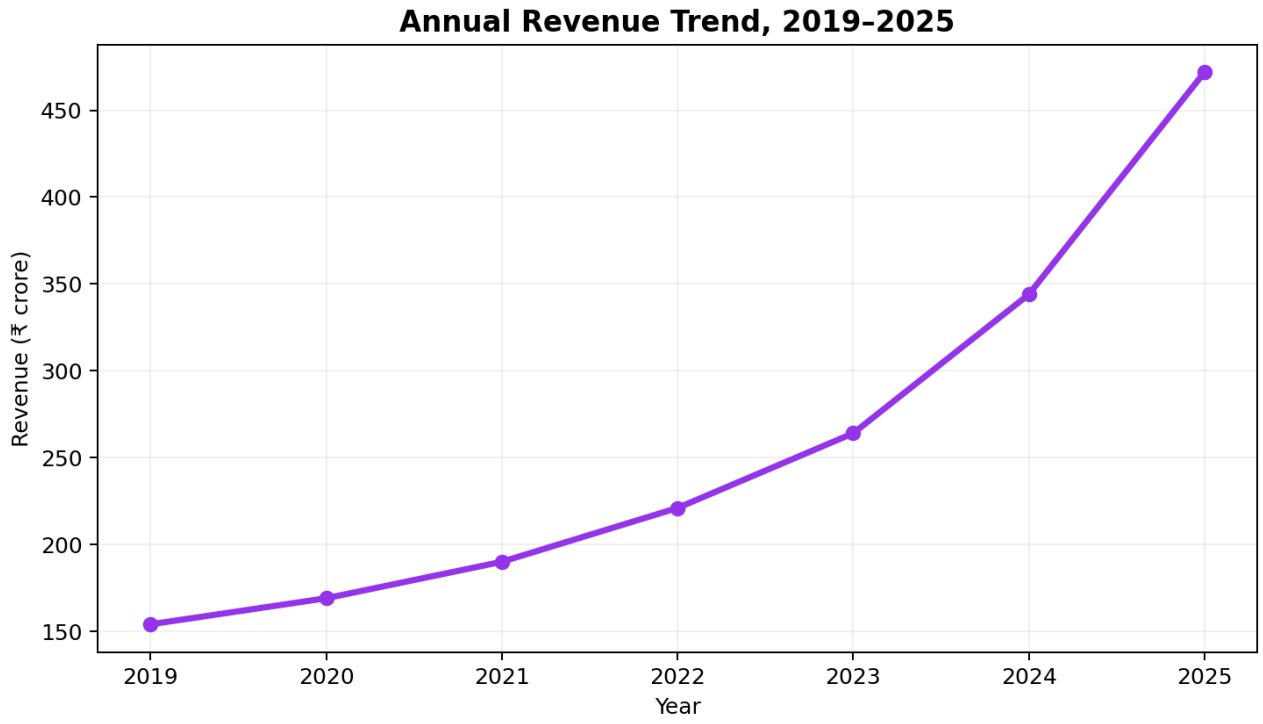

10. How Has Annual Revenue Changed from 2019 to 2025?

Annual revenue increases from ■**154 crore in 2019** to ■**472 crore in 2025**.

The increase is ■**318 crore**, representing approximately **206.5%** growth over the seven-year period.

The largest annual increase is from 2024 to 2025, when revenue rises from ■**344 crore** to ■**472 crore**, an increase of ■**128 crore**.

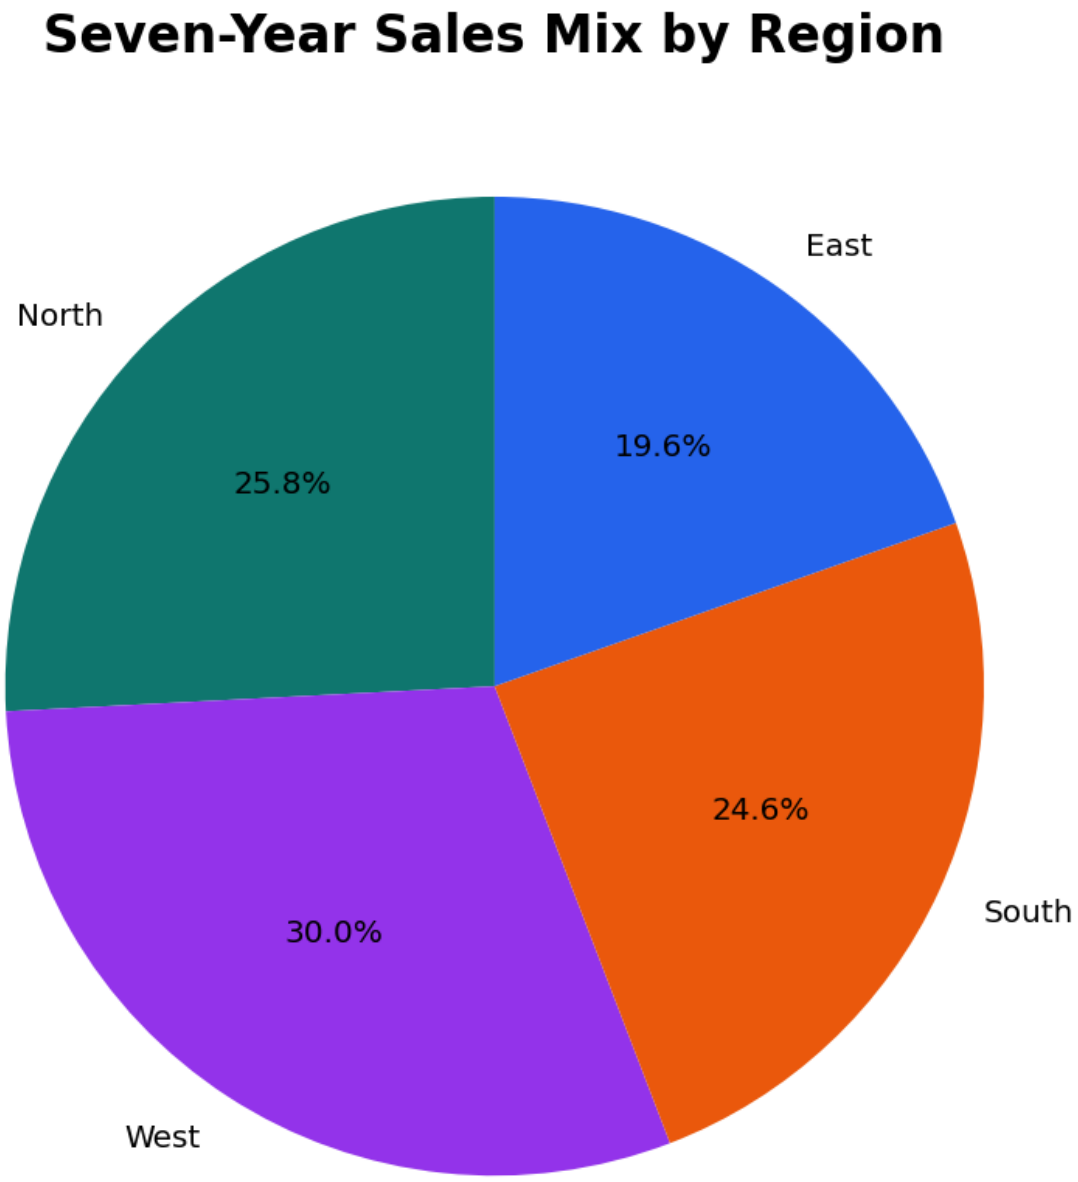

11. What Is the Regional Sales Mix?

West contributes **67,900 units**, which is approximately **30.0%** of the illustrative four-region total of **226,200 units**.

North contributes about **25.8%**, South **24.6%** and East **19.6%**.

The combined West and North share is approximately **55.8%**, showing that more than half of the simulated regional volume comes from these two markets.

12. KPI Summary – Revenue and Sales Performance

The KPI table consolidates the main numerical results. The most important revenue KPI is total seven-year revenue of **■1,814 crore**, while the strongest annual revenue is **■472 crore in 2025**.

KPI	Value	Insight
Seven-year revenue	**■1,814 crore**	Total illustrative revenue from 2019–2025
Average annual revenue	**■259.1 crore**	Average revenue per year
Highest annual revenue	**■472 crore**	Recorded in 2025
Revenue growth	**206.5%**	2019 to 2025 growth
Total regional units	**226.2k**	Four-region illustrative volume
Average product rating	**3.86/5**	Seven-year average rating
Top single-day sale	**312 units**	Highest illustrative single-day volume
Highest revenue product	**Complan**	**■196 crore**
Highest-profit region	**West**	**■19.60/unit**

Key Findings

Complan leadership: Complan records **34,200 units** and **■196 crore** in illustrative seven-year revenue.

Strong revenue growth: Annual revenue rises from **■154 crore** to **■472 crore**, an increase of **■318 crore**.

Strong sales growth: Annual sales increase from **18.4 million** to **44.8 million units**.

West is strongest region: West records **67,900 units** and **■19.60/unit** simulated profit.

Rating improvement: Average rating rises from **3.78/5** to **3.93/5**.

Revenue concentration: Complan, Sugar Free Gold and Glucon-D together contribute **■558 crore** in illustrative product revenue.

Regional concentration: West and North together contribute approximately **55.8%** of the illustrative regional volume.

Important limitation: All sales, revenue, rating, regional and pricing numbers are synthetic for academic analysis; they are not official Zydus Wellness transaction figures.

Recommendations

Protect Complan's leadership: Maintain strong availability because it leads both simulated volume (**34,200 units**) and revenue (**■196 crore**).

Expand West strategically: West leads regional volume (**67,900 units**) and simulated profit (**■19.60/unit**).

Develop East: East has the lowest simulated volume (**44,300 units**) and profit (**■13.70/unit**), suggesting a distribution opportunity.

Use ratings as a KPI: Track the rating trend because the illustrative average improves from **3.78/5** to **3.93/5**.

Focus on high-revenue combinations: Complan–North (**■96 crore**), Sugar Free Gold–West (**■92 crore**) and Glucon-D–West (**■88 crore**) should receive priority in inventory and channel analysis.

Move to predictive analytics: Use historical sales, revenue, product, region, price and rating variables to forecast future demand and revenue.

Appendix: Product Units and Ratings

Product	Units sold	Avg rating
Complan	**34,200**	**4.12/5**
Sugar Free Gold	**32,600**	**4.18/5**
Glucon-D	**31,800**	**4.15/5**
Everyuth Scrub	**27,400**	**4.10/5**
Nycil Powder	**25,100**	**4.04/5**
Nutralite	**22,800**	**4.08/5**
Sugar Free Natura	**21,400**	**4.16/5**
Everyuth Peel-Off	**20,300**	**4.13/5**
Sugar Free Green	**18,600**	**4.09/5**
Complan NutriGro	**16,900**	**4.06/5**
Glucon-D Mango	**15,700**	**4.11/5**
I’m Lite	**14,300**	**4.02/5**
Nutralite Mayonnaise	**12,900**	**4.05/5**
Everyuth Tan Removal	**11,800**	**4.00/5**
Nycil Prickly Heat Spray	**10,300**	**3.98/5**
Sugar Free D’Lite	**9,200**	**4.07/5**
Glucon-D Nimbu Pani	**8,500**	**4.10/5**
RiteBite Max Protein	**7,800**	**4.14/5**
Everyuth Aloe Vera Gel	**6,900**	**4.03/5**
Glucon-D Activors	**6,100**	**4.01/5**
